1. Corporate information

AC Immune SA was founded in 2003. The Company controls a fully-owned subsidiary, AC Immune USA, Inc. (“AC Immune USA” or “Subsidiary” and, together with AC Immune SA, “AC Immune,” “ACIU,” “Company,” “we,” “our,” “ours,” “us”), which was organized under the laws of Delaware, USA in June 2021. The Company and its Subsidiary form the Group.

AC Immune SA is a clinical-stage biopharmaceutical company leveraging our two proprietary technology platforms to discover, design and develop novel proprietary medicines and diagnostics for prevention and treatment of neurodegenerative diseases (NDD) associated with protein misfolding. Misfolded proteins are generally recognized as the leading cause of NDD, such as Alzheimer’s disease (AD) and Parkinson’s disease (PD), with common mechanisms and drug targets, such as amyloid beta (Abeta), Tau, alpha-synuclein (a-syn) and TDP-43. Our corporate strategy is founded upon a three-pillar approach that targets (i) AD, (ii) focused non-AD NDD including Parkinson’s disease, ALS and NeuroOrphan indications and (iii) diagnostics. We use our two unique proprietary platform technologies, SupraAntigen (conformation-specific biologics) and Morphomer (conformation-specific small molecules), to discover, design and develop novel medicines and diagnostics to target misfolded proteins.

The Interim Condensed Consolidated Financial Statements of AC Immune SA as of and for the six months ended June 30, 2026 were authorized for issuance by the Company’s Audit and Finance Committee on August 3, 2026.

2. Basis of preparation and changes to the Company’s accounting policies

Statement of compliance

These Interim Condensed Consolidated Financial Statements as of June 30, 2026 and for the six months ended June 30, 2026 and 2025, have been prepared in accordance with International Accounting Standard 34 (IAS 34), *Interim Financial Reporting*, as issued by the International Accounting Standards Board (IASB), and such financial information should be read in conjunction with the audited consolidated financial statements in AC Immune’s Annual Report on Form 20-F for the year ended December 31, 2025.

Basis of measurement

These Interim Condensed Consolidated Financial Statements have been prepared under the historical cost convention.

Functional and reporting currency

These Interim Condensed Consolidated Financial Statements and accompanying notes are presented in Swiss Francs (CHF), which is AC Immune SA’s functional currency and the Group’s reporting currency. The Company’s subsidiary has a functional currency of the US Dollar (USD). The following exchange rates have been used for the translation of the financial statements of AC Immune USA:

Critical judgments and accounting estimates

The preparation of the Company's Interim Condensed Consolidated Financial Statements in conformity with IAS 34 requires management to make judgments, estimates and assumptions that affect the amounts reported in the Interim Condensed Consolidated Financial Statements and accompanying notes, and the related application of accounting policies as it relates to the reported amounts of assets, liabilities, income and expenses.

The areas where AC Immune has had to make judgments, estimates and assumptions relate to (i) revenue recognition on Licensing and Collaboration Agreements (LCAs), (ii) clinical development accruals, (iii) net employee defined benefit liability, (iv) share-based compensation, (v) right-of-use assets and lease liabilities and (vi) our IPR&D asset (intangible asset). Actual results may differ from these estimates. Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimates are revised and in any future periods affected.

Fair value of financial assets and liabilities

The Company's financial assets and liabilities are composed of receivables, short-term financial assets, cash and cash equivalents, trade payables, and lease liabilities. The fair value of these financial instruments approximates their respective carrying values due to the short-term maturity of these instruments, and are held at their amortized cost in accordance with IFRS 9, unless otherwise explicitly noted.

Accounting policies, new standards not yet effective, interpretations and amendments adopted by the Company

The accounting policies adopted in the preparation of the Interim Condensed Consolidated Financial Statements are consistent with those followed in the preparation of the Company's annual consolidated financial statements for the year ended December 31, 2025.

In May and December 2024, the IASB issued narrow scope amendments to IFRS 9 *Financial Instruments* and IFRS 7 *Financial Instruments: Disclosures*. These amendments clarify the requirements for determining contractual cash flows of financial assets, financial liabilities and lease liabilities, as well as guidance on contracts referencing nature-dependent electricity. These amendments are effective January 1, 2026. These amendments have been applied retrospectively and the adoption of these amendments did not have material effects on the Company's financial statements. The Company has elected to derecognize financial liabilities upon the settlement date for all of its electronic payment systems.

In April 2024, the IASB issued IFRS 18 *Presentation and Disclosure in Financial Statements* (IFRS 18). The new standard on presentation and disclosure in the financial statements will change the structure of the consolidated statements of income/(loss), require disclosures for certain profit or loss performance measure that are reported outside of the financial statements, and will enhance principles on aggregation and disaggregation within the notes to the financial statements.

IFRS 18 introduces new requirements for presentation within the consolidated statements of income/(loss), including specified totals and subtotals and classification of all income and expenses into one of five categories: operating, investing, financing, income taxes and discontinued operations. Although the new standard will have no impact on the Company's net loss, the Company expects that the grouping of income and expenses in the consolidated statements of income/(loss) into the new categories will impact how operating profit (loss) is determined. Foreign exchange differences as well as interest income and expenses currently aggregated in net financial result will need to be disaggregated and classified in the category where the related income and expense from the underlying item is classified.

From the statement of cash flows perspective, the starting point for calculating cash flows from operating activities will change to operating profit (loss). Additionally, there will be changes to how interest received and interest paid are presented. Interest paid will be presented as financing cash flows and interest received as investing cash flows, which is a change from current presentation as part of operating cash flows.

Other aspects of the standard which are still being assessed, but are not expected to have a material impact on presentation or disclosure include: New disclosures for management-defined performance measures (MPMs); the breakdown of nature of expenses for lines presented by function in the operating category of the consolidated statements of income/(loss).

The Company intends to adopt IFRS 18 for the reporting period commencing January 1, 2027. Upon adoption, a reconciliation will be disclosed for each line item in the consolidated statement of loss between the restated amounts and the amounts previously published upon transition of IAS 1 to IFRS 18. The Company is still assessing the detailed impact that the transition to IFRS 18 will have on the financial statements.

Going concern

The Company believes that it will be able to meet all of its obligations as they fall due for at least 12 months from the filing date of this Form 6-K, after considering the Company's cash position of CHF 27.8 million and short-term financial assets of CHF 47.6 million as of June 30, 2026. Hence, these unaudited Interim Condensed Consolidated Financial Statements have been prepared on a going-concern basis.

To date, the Company has financed its cash requirements primarily from its public offerings, share issuances, contract revenues from its LCAs and grants. The Company is a clinical stage company and is exposed to all the risks inherent to establishing a business. Inherent to the Company's business are various risks and uncertainties, including the substantial uncertainty as to whether current projects will succeed and our ability to raise additional capital as needed. These risks may require us to take certain measures such as delaying, reducing or eliminating certain programs. The Company's success may depend in part upon its ability to (i) establish and maintain a strong patent position and protection, (ii) enter into collaborations with partners in the pharmaceutical and biopharmaceutical industries, (iii) successfully move its product candidates through clinical development, (iv) attract and retain key personnel and (v) acquire capital to support its operations.

Contract revenues and other operating income

For the six months ended June 30, 2026, AC Immune generated CHF 16.2 million in contract revenue compared with CHF 2.3 million in the prior comparable period.

3.1 Licensing and collaboration agreements

For a discussion of our licensing and collaboration agreements for the fiscal year ended December 31, 2025, please refer to Note 14.1 "Licensing and Collaboration agreements" of our Annual Report on Form 20-F for the year ended December 31, 2025 filed on March 13, 2026.

Anti-Abeta Active Immunotherapy in AD – 2026 amendment agreement Takeda Pharmaceuticals, USA, Inc.

In February 2026, pursuant to the existing agreement described below, the Company signed an amendment to initiate the final Cohort in the ongoing phase 1b/2 ABATE trial of anti-Abeta active immunotherapy ("Cohort AD4" or "AD4"). Under the terms of the agreement, AC Immune is eligible to earn milestone payments upon pre-defined clinical achievements over the course of the study.

AC Immune assessed this arrangement in accordance with IFRS 15 and concluded that the scope and price of this arrangement were defined at their standalone selling price in the original agreement below with no material right given. As a result, the activation of this amendment has been treated as a separate contract, and the responsibility for development, CMC, and regulatory activities of AD4 is considered a distinct performance obligation. This performance obligation is to be recognized over time, with the transaction price constrained by the achievement of future milestones throughout the study.

The Company achieved the first milestone under this arrangement in April 2026 upon the treatment of first patient in Cohort AD4 in ABATE in the amount of \$12.0 million (CHF 9.5 million at the transaction date of April 30, 2026). The Company will recognize revenue related to the fulfilment of its obligation over time, using an input method reflecting the costs incurred relative to the total costs expected to be incurred. During the six months ended June 30, 2026, the Company recorded contract revenue of CHF 3.1 million related to this milestone, and deferred revenue of CHF 6.4 million, all of which is classified within short-term deferred contract revenue as the Company expects to realize the remainder within 12 months of the reporting date. The \$12.0 million (CHF 9.8 million) milestone is outstanding in accounts receivable as of June 30, 2026.

Anti-Abeta Active Immunotherapy in AD – 2024 agreement Takeda Pharmaceuticals, USA, Inc.

In May 2024, the Company entered into a worldwide option and license agreement with Takeda Pharmaceuticals, USA, Inc. (Takeda) for our active immunotherapies targeting Abeta, including ACI-24.060 for the treatment of AD. AC Immune will be responsible for completing the ABATE trial. Following option exercise, Takeda would conduct and fund all further clinical development and be responsible for all global regulatory activities as well as worldwide commercialization. Under the terms of the agreement, AC Immune received an upfront payment of USD 100.0 (CHF 92.3) million in May 2024 and is eligible to receive an option exercise fee in the low-to-mid nine-figure USD range and additional potential development, commercial and sales-based milestones of up to approximately USD 2.1 (CHF 1.7) billion if all related milestones are achieved over the course of the agreement. Upon commercialization, AC Immune will be entitled to receive tiered mid-to-high teens percentages royalties on worldwide net sales.

Under the terms of the agreement, Takeda may terminate the agreement at any time by providing 90 days' notice to the Company. If not otherwise terminated, the agreement shall continue until Takeda decides not to exercise its license option or until the expiration of all royalty obligations as outlined in the contract.

AC Immune assessed this arrangement in accordance with IFRS 15 and concluded that Takeda is a customer. The Company identified the following performance obligations under the contract: (i) a license option and (ii) development, chemistry, manufacturing, and controls ("CMC") and regulatory activities as outlined in the development and CMC plans, which are necessary to deliver the data package to Takeda. AC Immune concluded that the license option is considered a material right, as the value of the license exceeds the option exercise fee, thereby considering it a distinct performance obligation. The development, CMC, and regulatory activities are treated as one distinct performance obligation because the underlying activities are not distinguishable in the context of the contract and are inputs to an integrated development program that will generate valuable data and information for Takeda in determining whether to exercise the option.

At the agreement's execution, the transaction price included only the upfront and non-refundable consideration of USD 100.0 (CHF 92.3) million. At inception, none of the development milestones, which may occur prior to the Takeda option exercise, were included in the transaction price, as all milestone amounts were fully constrained. The Takeda option exercise payment and any future development and commercial milestone payments, and royalties following the Takeda option exercise were excluded from the initial transaction price at contract inception. The option exercise fee is considered variable consideration as it depends on Takeda's decision to exercise. In assessing that future development or commercial milestones are fully constrained, the Company considered numerous factors, including that the receipt of these milestones is contingent upon success in future clinical trials and the licensee's efforts, and thus not highly probable to obtain. Any consideration related to sales-based milestones (including royalties) will be recognized when the related sales occur, as they predominantly relate to the license that will be granted to Takeda upon exercise and therefore have also been excluded from the transaction price. The Company will re-evaluate the transaction price in each reporting period as uncertain events are resolved or other changes in circumstances occur.

The valuation of each performance obligation involves estimates and assumptions, with the timing of revenue recognition determined by either delivery or the provision of services. In line with the allocation objective under IFRS 15, the Company allocated the USD 100.0 (CHF 92.3) million upfront payment within the transaction price to the license option and development, CMC, and regulatory activities, using the relative stand-alone selling price method. For the stand-alone selling price of the license option, the Company utilized an income-based approach, which included key assumptions such as the post-option development timeline and costs, revenue forecasts, discount rates, and probabilities of development and regulatory success. The stand-alone selling price for the development, CMC and regulatory activities was calculated using a cost-plus margin approach based on the estimated development timeline. The Company allocated the transaction price based on the relative stand-alone selling prices, assigning USD 87.4 (CHF 80.7) million to the license option and USD 12.6 (CHF 11.6) million to development, CMC, and regulatory activities.

The Company has deferred revenue recognition for the license option and will recognize the entirety of the revenue either when the option is exercised and Takeda obtains the exclusive license, or when the option expires. The Company will recognize revenue related to the development, CMC and regulatory performance obligation over the estimated period of completion of these obligations, using an input method reflecting the costs incurred relative to the total costs expected to be incurred.

During the six months ended June 30, 2026, the Company recorded contract revenue of CHF 2.1 million, reflecting its efforts under this agreement. As of June 30, 2026, the Company recorded CHF 84.0 million in deferred contract revenue related to the unsatisfied performance obligations under this agreement. The deferred contract revenue allocated to the license option is classified as short-term on the condensed consolidated balance sheets because, in accordance with IAS 1, the Company does not have the right to defer the settlement of that portion for at least twelve months after the reporting period. The deferred contract revenue allocated to development, CMC, and regulatory activities will be recognized over the remaining performance period and classified as either current or non-current on the condensed consolidated balance sheets, based on the expected timing of satisfaction of the performance obligations.

Morphomer Tau small molecule – 2018 license agreement with Eli Lilly and Company

In April 2026, the Company announced an agreement with Eli Lilly and Company (Lilly) to amend their 2018 license and collaboration agreement to research and develop Tau aggregation inhibitor small molecules for the potential treatment of Alzheimer's disease (AD) and other neurodegenerative diseases. The amendment continues the research and collaboration to cover development of new lead Tau Morphomer[®] candidates and potential back-up compounds. AC Immune is eligible for further development, regulatory and commercial milestones of over CHF 1.7 billion, plus tiered percentage royalty payments in the low double digits, as previously disclosed.

Under this amendment, AC Immune received a CHF 10.0 million upfront payment and a subsequent milestone payment of CHF 1.0 million in the six months ended, June 30, 2026. The upfront payment was received upon delivery of a new pre-clinical data package for new lead Tau Morphomer[®] molecules under the amended agreement. The upfront payment and the subsequent milestone payment totaling CHF 11.0 million were fully recognized as contract revenue in the six months ended June 30, 2026 as the related performance obligations had been satisfied.

3.2 Grant income

Grant from Vijay and Marie Goradia Charitable Foundation

In June 2026, the Company finalized the terms to receive a research grant of \$4 million (CHF 3.2 million at transaction date) from The Vijay and Marie Goradia Charitable Foundation. The grant will support extending Part 1 of the ongoing Phase 2 VacSYn trial of ACI-7104, AC Immune's anti-alpha-synuclein (a-syn) active immunotherapy, in early Parkinson's disease (PD). As the Company has reasonable assurance that it will satisfy the underlying grant conditions and the grant will be received, the Company has recorded other current receivables of \$4 million (CHF 3.2 million at recognition date) and related deferred income in the same amount. The deferred income will be recognized over the life of the study. As of June 30, 2026, CHF 0.1 million has been recognized under the arrangement, and CHF 3.1 million of income remains deferred. CHF 1.3 million of the deferred income is expected to be recognized over the next year and is thereby classified as short-term.

6. Right-of-use assets, long-term financial assets and lease liabilities

AC Immune recognized no additions for its right-of-use of leased assets for the six months ended June 30, 2026.

Regarding lease liabilities, the amortization depends on the rate implicit in the contract or the incremental borrowing rate for the respective lease component. The weighted averages of the incremental borrowing rates are 5.5% for buildings, 3.3% for office equipment and 7.2% for IT equipment, respectively.

The following table shows the movements in the net book values of right-of-use of leased assets for the six months ended June 30, 2026:

12. Share-based compensation

Share-based option awards

As of June 30, 2026, there are equity-based instruments outstanding that the Company has granted under two different plans.

The Company’s 2016 Share Option and Incentive Plan (SOIP) was approved by the shareholders at the ordinary shareholders’ meeting in November 2016. The 2016 Plan authorizes the grant of incentive and non-qualified share options, share appreciation rights, restricted share awards, restricted share units, unrestricted share awards, performance share awards, performance-based awards to covered employees and dividend equivalent rights. The Company only grants equity-based instruments from the SOIP as of June 30, 2026.

The number and weighted-average exercise prices (in CHF) of options under the share option programs for Plans C1 and the 2016 SOIP are as follows:

	Number of options	Weighted- average exercise price (CHF)	Weighted- average remaining term (years)
Outstanding at January 1, 2026	5,518,564	4.25	5.9

Non-vested at June 30, 2026	1,473,029	2.55
Vested and exercisable at June 30, 2026	2,891,435	2.83

The expense charged against the income statement was CHF 2.6 million and CHF 2.7 million for the six months ended June 30, 2026 and 2025, respectively. The expense is determined by the Company based on the number of instruments that are expected to become exercisable.

13. Finance result, net

For the six months ended June 30, 2026 and 2025, the net finance result amounted to a gain of CHF 0.7 million and a loss of CHF 1.5 million, respectively. The increase in 2026 is primarily related to favorable exchange differences in the current period compared the prior year-to-date balance, driven by movement in the CHF versus foreign currencies, predominantly the US Dollar. This favorable change is partially offset by the period over period decrease in financial income due to interest received on net investments in short-term financial assets.

14. Subsequent events

Management has evaluated subsequent events after the balance sheet date, through the issuance of these Interim Condensed Consolidated Financial Statements, for appropriate accounting and disclosures. The Company has determined that there were no other such events that warrant disclosure or recognition in these Interim Condensed Consolidated Financial Statements.

Business Overview

AC Immune is a clinical stage biopharmaceutical company developing a pipeline of products, including both active immunotherapies and small molecules targeting key misfolded proteins and pathways for the treatment of different neurodegenerative diseases.

The company has a growing focus on its wholly owned proprietary clinical stage programs, including: ACI-7104, an active immunotherapy targeting alpha-synuclein (a-syn), in a Phase 2 clinical trial (VacSYn) for Parkinson's disease; and ACI-19764, a small molecule inhibitor of the NLRP3 inflammasome, in a Phase 1 trial in healthy volunteers soon to be expanded to include patients with elevated hsCRP. In addition, an early-stage Morphomer small molecule development program targeting intracellular a-syn is advancing towards the clinic.

The Company has secured strategic partnerships with leading global pharmaceutical companies around therapeutic programs in development for Alzheimer's disease, including: a collaboration with Takeda on ACI-24 targeting Abeta in a Phase 1b/2 clinical study (ABATE); a collaboration with Janssen-J&J on ACI-35 targeting phospho-Tau in a Phase 2b clinical study (ReTain); and a collaboration with Lilly developing brain-penetrant small molecule inhibitors for the intracellular targeting of Tau.

Our wholly-owned clinical-stage therapeutic product candidates include:

- **ACI-7104.** ACI-7104, our active immunotherapy targeting pathological a-syn, is currently being tested in a placebo-controlled, double-blind, adaptive, biomarker-based Phase 2 study (VacSYn; NCT06015841) in the EU and in the UK. This trial is evaluating the safety and immunogenicity of ACI-7104 against a-syn and pathological a-syn species in early PD. Additionally, disease-specific imaging and fluid biomarkers and progression of motor and non-motor symptoms of PD will be monitored. The VacSYn trial commenced in July 2023 with the dosing of the first patient and is progressing well with over 30 patients randomized in Part 1 of the study. Interim analyses of Part 1 reported in December 2025 demonstrated that ACI-7104 induced strong anti-a-synuclein antibody levels and was generally well tolerated with no safety issues related to the study drug reported to date. Additionally, ACI-7104 treatment was associated with changes in certain key biomarkers and clinical performance measurements suggesting a potential disease-modifying effect and slowing of disease progression. Final results from Part 1 will be reported in H2 2026 including pharmacodynamic data. AC Immune may decide to initiate Part 2 of the Phase 2 VacSYn trial in a much larger cohort of patients.
- **ACI-19764.** ACI-19764 is AC Immune's small molecule drug in development for the inhibition of the NLRP3 inflammasome. The NLRP3 inflammasome can be chronically activated in so-called 'sterile inflammation' which occurs in response to non-infectious, tissue-damage related triggers including protein aggregation (as in different neurodegenerative diseases), metabolic stress, hyperglycemia, cholesterol crystals, and others. The NLRP3 inflammasome plays a role in both neuroinflammation and systemic inflammation, and its inhibition offers therapeutic options to disease management. ACI-19764 entered Phase 1 clinical testing in healthy volunteers in February 2026. Results from single-ascending dose and multiple-ascending dose cohorts will be released in H2 2026. Subsequently, ACI-19764 treatment of patients with elevated hsCRP, a marker of systemic inflammation, will be initiated with results anticipated in late H2 2026.

Our product candidates being developed in collaborations with pharma partners include:

- **ACI-24 for AD and for AD in DS.** ACI-24 is AC Immune's anti-Abeta active immunotherapy being evaluated in collaboration with Takeda in patients with AD and in individuals with DS. ACI-24 contains Abeta unrelated T-helper cell epitopes to increase the magnitude and the boostability of the antibody response against pathological Abeta. It has demonstrated tolerability and immunogenicity in mouse and NHP studies. ACI-24 is currently being tested in the ABATE Phase 1b/2 trial (NCT05462106).

ABATE is a multicenter, adaptive, double-blind, randomized, placebo-controlled study designed to assess the safety, tolerability, immunogenicity, and pharmacodynamic effects of ACI-24 in subjects with prodromal AD and in adults with Down Syndrome (DS) with evidence of brain amyloid plaques at PET scan. The Clinical Trial Application (CTA) was approved by the UK Medicines and Healthcare Products Regulatory Agency (MHRA) and Spanish Agency for Medicines and Health Products (AEMPS) with the first AD patient dosed in June 2022. In June 2023, AC Immune received Fast Track designation from the FDA for ACI-24, for the treatment of AD. This followed FDA clearance of the Investigational New Drug (IND) application in May 2023 enabling the ABATE study to include clinical trial sites to enroll participants with DS in the U.S. Based on the safety profile and induction of an anti-Abeta antibody response post-dosing of ACI-24 in patients with AD, dosing of the first individual with DS occurred in June 2023. Recruitment of participants into the three DS cohorts has been concluded. ACI-24 has been shown to be generally well tolerated in individuals with AD and with Down syndrome, noting in particular that no case of Amyloid-Related Imaging Abnormalities-vasogenic edema (ARIA-E) has been reported at brain MRI in these two study populations. Based on data available as of June 2026, there has been no death. In subjects with AD, two serious adverse events are considered possibly related to the study treatment.

On June 30, 2026, headline interim results were reported for the first three cohorts (AD1, AD2 & AD3) of 74 patients with prodromal Alzheimer's disease (AD) in the Phase 1b/2 ABATE trial following 12 months of treatment with ACI-24 anti-amyloid beta (Abeta) active immunotherapy. Anti-Abeta antibody responses were detected at every dose level with a dose response. A fourth cohort, AD4, is currently evaluating ACI-24 with an additional adjuvant to boost immunogenicity and antibody responses.

As announced on May 13, 2024, this program is the subject of an exclusive option and license agreement with Takeda Pharmaceuticals USA, Inc. (Takeda). Under the terms of the agreement, AC Immune received an upfront payment of USD 100.0 (CHF 92.3) million from Takeda and is eligible to receive payments of up to approximately USD 2.1 (CHF 1.7) billion including an option exercise fee in the low-to-mid nine-figure USD range and potential development, commercial and sales-based milestone payments. Upon commercialization, AC Immune will be entitled to receive tiered mid-to-high teens percentages royalties on worldwide net sales. Further details related to the agreement are available on the Current Report on Form 6-K furnished by the Company on May 13, 2024 with the SEC.

- **ACI-35 (JNJ-64042056 also now referred to as JNJ-2056).** AC Immune and Janssen Pharmaceuticals, Inc. (Janssen), part of Johnson & Johnson, evaluated the anti-phosphorylated-Tau (anti-pTau) active immunotherapy ACI-35 in a Phase 1b/2a study in subjects with early AD (NCT04445831). Results showed that ACI-35 immunization was generally safe and well-tolerated, and generated a rapid antibody response (anti-pTau, anti-ePHF and anti-Tau IgG) after the first injection (at week 2) at the 3 tested doses. A boosting effect was observed after each injection especially against pathological Tau species (pTau and ePHF). The antibody response was strongly directed against these pathological Tau species but not against non-phosphorylated Tau. Long-term maintenance of the anti-ePHF IgG titers against endogenous pathological Tau was observed at the mid- and high doses.

ACI-35/JNJ-2056 is now being assessed in an ongoing Phase 2 study, ReTain (NCT06544616) in subjects with preclinical (i.e., pre-symptomatic) AD with confirmed early-stage Tau pathology. JNJ-2056 was granted Fast Track designation by the FDA, for the treatment of AD in July 2024. In September 2024, AC Immune received a milestone payment related to the ReTain trial and the first patient was dosed in H2 2024. As announced on

February 17, 2026, recruitment of new participants into the ongoing trial was paused. Janssen is seeking a protocol amendment for the ReTain study to enable earlier insights into the biological activity of JNJ-2056 and its potential for clinical benefit. The study remains active, with enrollment paused, and there is no change for enrolled participants at this time. The study is ongoing based on ~60 enrolled patients with a minimum of 12 months and up to 24 months of treatment and follow-up.

- **Morphomer Tau aggregation inhibitors.** We are researching and developing small molecule Tau aggregation inhibitors with plans to evaluate candidates in AD. Continued candidate characterization across the research program has also identified new and highly differentiated candidates with excellent brain exposure and selectivity for pathological aggregated Tau.

As announced on April 7, 2026, AC Immune and Lilly amended their 2018 license and collaboration agreement to research and develop Tau aggregation inhibitor small molecules for the potential treatment of Alzheimer's disease (AD) and other neurodegenerative diseases. The amendment continues the research and collaboration to cover development of new lead Tau Morphomer® candidates and potential back-up compounds. AC Immune received a CHF 10 million upfront payment and will receive a subsequent milestone payment subject to Phase 1 dosing, in addition to other potential development, regulatory and commercial milestones of over CHF 1.7 billion, plus tiered percentage royalty payments in the low double digits, as previously disclosed.

- **PI-2620.** PI-2620 is the Tau-PET imaging agent discovered during the collaboration of AC Immune and Life Molecular Imaging (LMI, recently acquired by Lantheus Holdings, Inc.). PI-2620 is a highly differentiated, Tau diagnostic for AD as well as non-AD tauopathies such as progressive supranuclear palsy (PSP) and corticobasal degeneration (CBD). Results have demonstrated PI-2620's differentiated characteristics as a diagnostic tool for studying Tau-related diseases. Results on the longitudinal use of PI-2620 in 52 participants (7 with normal cognition, 28 with mild cognitive impairment (MCI), and 17 with AD) from an investigator sponsored Phase 2 trial at the Asan Medical Center (NCT03903211) were presented at the 2022 AAIC and published in 2024 in the peer-reviewed Journal of Nuclear Medicine. Following these results, LMI moved PI-2620 into late-stage clinical development in AD and made a milestone payment to AC Immune. The first Alzheimer's patient in ADvance, the pivotal Phase 3 histopathology study in AD (NCT05641688), was imaged in January 2023. In August 2024, partner LMI has received Fast Track Designation for the diagnostic ¹⁸F-PI-2620, from the U.S. FDA in three neurodegenerative conditions: AD, PSP, and CBD.

- **ACI-12589 and ACI-15916.** Our Morphomer platform delivered the first clinically validated a-syn-PET tracer, ACI-12589, which addresses the differential diagnosis of multiple system atrophy (MSA) from other neurodegenerative diseases and potentially allows precision medicine approaches and biomarker-based clinical development in this indication. ACI-12589 preclinical and clinical data were published in October 2023 in Nature Communications. In addition, medicinal chemistry optimization strategies have allowed the identification of our next-generation clinical candidate, ACI-15916. Compared to ACI-12589, ACI-15916 shows significantly higher target occupancy in brain slices from idiopathic forms of PD and has therefore the potential to enable imaging of a-syn pathology in patients with PD. IND/CTA-enabling studies for ACI-15916 were completed in H2 2024 and a Phase 1 trial in PD was initiated in Q1 2025. This study is still currently open and initial results were presented in June 2026 at two conferences, Neuroreceptor Mapping 2026 (Uppsala, Sweden) and the MJFF Imaging Symposium (London, UK).
- **ACI-19626, TDP-43 imaging diagnostic.** Our Morphomer platform has delivered the first-in-class TDP-43 PET tracer, ¹⁸F-ACI-19626 entering the FiH evaluation in healthy volunteers and in patients with TDP-43 proteinopathies. ACI-19626 shows optimal binding potential in frontotemporal lobar degeneration (FTLD)-TDP brain tissue with no binding to physiological TDP-43, excellent selectivity over other aggregated proteins commonly present in neurodegenerative diseases and aging brain, excellent pharmacokinetic properties suitable for human brain imaging. This PET tracer is envisioned to enable early and differential diagnosis, improve the design and interpretation of clinical trials allowing for patient stratification, selection of optimal timing for therapeutic intervention and pharmacodynamic effect evaluation. This first-in-class molecule could have a high impact, opening new opportunities for therapeutic interventions in diseases with high unmet medical needs and huge societal burdens, such as ALS, FTD and AD. CTA enabling studies for ACI-19626 were completed in July 2024. A Phase 1 trial was initiated in Q1 2025 and highly encouraging interim results in both FTD and ALS from this ongoing study have been presented at conferences, including AD/PD2026 and AAIC2026.

H1 2026 Company highlights

Wholly-Owned Programs

AC Immune's wholly-owned pipeline is built around three differentiated programs against α -synuclein, TDP-43, and NLRP3, targeting key mechanisms underlying neurodegenerative disease based on extensive preclinical data. The following updates focus on our clinical stage programs. ACI-7104 is an active immunotherapy targeting pathological α -synuclein in Parkinson's disease, designed to generate a targeted immune response with the potential to modify disease progression. ACI-19764 is a small-molecule NLRP3 inflammasome inhibitor aimed at reducing neuroinflammation, a fundamental driver of multiple neurodegenerative disorders. ACI-19626 is a first-in-class TDP-43 PET tracer designed to visualize TDP-43 pathology in living patients, addressing a major unmet need in ALS and related diseases. Together, these assets provide multiple near-term data catalysts and showcase AC Immune's ability to translate deep neuroscience expertise into both therapeutics and diagnostics.

ACI-7104: anti-a-syn active immunotherapy

- The VacSYn placebo-controlled Phase 2 clinical trial continues, with full results from the complete data set for Part 1 of the trial at week 104 expected to be reported in H2 2026. Clinicaltrials.gov identifier: NCT06015841
- Part 1 of the ongoing Phase 2 VacSYn trial of ACI-7104 in early Parkinson's disease (PD) was extended and received support via a research grant of \$4 million from The Vijay and Marie Goradia Charitable Foundation.
- Previously reported interim results from Part 1 at 76 weeks included changes in biomarkers and clinical measures assessed as signals of the potential impact of treatment with ACI-7104.
- Results to support further development of the program and discussion with regulators to establish a clinical development plan towards registration.

ACI-19764: brain penetrant NLRP3 inhibitor

- Phase 1 trial in healthy volunteers continues, with initial SAD/MAD and pharmacodynamics results expected in the near future.

- These will be followed later in H2 2026 by Phase 1b results on reductions in hsCRP levels in a cohort of patients with CV-risk factors and elevated hsCRP on entry into the trial.

ACI-19626: TDP-43 PET tracer

- Presented new preliminary results from a Phase 1 clinical trial of first-in-class TDP-43 positron emission tomography (PET) tracer ACI-19626 showing increased uptake in the brains of patients with amyotrophic lateral sclerosis (ALS).

Partnered Programs

AC Immune's partnered portfolio validates the strength of its neuroscience platform through collaborations with leading global pharmaceutical companies. The pipeline includes anti-amyloid and anti-tau programs developed in collaboration with Takeda, Lilly, and Janssen, leveraging AC Immune's expertise in protein misfolding and neurodegenerative disease biology. The portfolio also includes diagnostic imaging assets developed with partners to improve patient identification, stratification and treatment monitoring. These partnerships provide access to substantial development resources, milestone and royalty opportunities, and multiple clinical catalysts.

ACI-24: anti-Abeta active immunotherapy

- Dosed the first patients in Cohort AD4 in the ongoing Phase 1b/2 ABATE trial of ACI-24 to treat prodromal Alzheimer's disease (AD). Cohort AD4 is evaluating enhancing ACI-24 with an additional adjuvant to boost immunogenicity. Following the cohort initiation, a \$12 million milestone payment from partner Takeda was triggered.
- Reported high level interim data from the first three cohorts (AD1, AD2 & AD3) of 74 prodromal AD patients in the ABATE trial, following 12 months of treatment. ACI-24 has been generally safe and well tolerated, with no evidence of amyloid-related imaging abnormalities-edema (ARIA-E). Anti-Abeta antibody responses were detected at every dose level.

Morphomer-Tau small molecule program

- Amended agreement with Eli Lilly and Co. (Lilly) continues the research and collaboration to include development of new lead Tau Morphomer® candidates and potential back-up compounds, reflecting growing excitement for targeting intracellular Tau and significant progress made with our Morphomer small molecules.
- AC Immune received a CHF 10 million upfront payment and will receive a subsequent milestone payment subject to Phase 1 dosing, in addition to other potential development, regulatory and commercial milestones of over CHF 1.7 billion, plus tiered percentage royalty payments in the low double digits, as previously disclosed.

Corporate Governance

- After long service Dr Andrea Pfeifer retired from her role as Chief Executive Officer (CEO) of AC Immune at the Annual General Meeting (AGM) to spend more time with her family. AC Immune's Board of Directors appointed the Chair, Dr Martin Zügel, to serve as interim CEO whilst a diligent search for a permanent successor continues apace.
- All agenda items at the AGM were approved by shareholders.

Results of Operations

Comparison of the six months ended June 30, 2026 and 2025

Contract revenues

For the six months ended June 30, 2026, the Company generated CHF 16.2 million in contract revenues compared to CHF 2.3 million in the comparable period. This represents an increase of CHF 13.9 million. The following table summarizes our contract revenues during the six months ended June 30, 2026 and 2025:

in CHF thousands, unaudited	For the Six Months Ended June 30,		Change
	2026	2025	
Takeda	5,232	2,296	2,936
Lilly	11,000	—	11,000
Total contract revenue	16,232	2,296	13,936

For the six months ended June 30, 2026, the increase of CHF 13.9 million compared with the prior period is due to:

- Revenues earned a result of the efforts under the Takeda arrangement, including revenues recognized for the new Cohort AD4 initiated in 2026.
- The upfront amount received upon the amendment to the Lilly agreement of CHF 10.0 million in 2026, and a subsequent milestone achieved in the amount of CHF 1.0 million.

Research and development expenses

Research and development activities are essential to our business and represent the majority of our costs incurred. Costs for certain development activities, such as clinical trials, are recognized based on an evaluation of the progress to completion of specific tasks using information from the clinical sites and our vendors. Our collaboration agreements have different agreements to share costs for the development of our product candidates.

We intend to continue investing in the development of our active immunotherapy programs, ACI-7104.056 targeting a-syn in Parkinson's disease and ACI-24.060 targeting abeta, through mid- and late-stage clinical development. We have completed our co-development cost obligations with Janssen related to the Phase 1b/2a studies of ACI-35.030, and the Phase 2b development costs, including clinical development, manufacturing and commercialization are borne by Janssen, and any remaining costs to AC Immune are not expected to be material. We also intend to continue investing in our intracellular programs, including our NLRP3 inhibitor, ACI-19764.

Finally, we intend to further advance the characterization of our other clinical and preclinical candidates, such as our Morphomer programs. In addition to the collaborative arrangements and proprietary held assets, we expect that our total future R&D costs will be lower than previous years following the reorganization in September 2025.

The table below provides a breakdown of our R&D costs, including direct R&D costs, manufacturing costs related to R&D and other R&D costs not allocated directly to programs for the periods covered by these Interim Condensed Consolidated Financial Statements. The R&D costs not allocated to specific programs include personnel costs, regulatory, quality assurance and intellectual property costs. We do not assign our internal costs, such as salary and benefits, share-based compensation expenses, laboratory supplies, and other indirect expenses and infrastructure costs to individual R&D projects, because the employees within our R&D groups are typically deployed across multiple R&D programs.

For the six months ended June 30, 2026, R&D expenses totaled CHF 22.2 million compared with CHF 32.7 million for the comparable period in 2025. This represents a decrease of CHF 10.5 million. The following table presents the R&D expenses during the six months ended June 30, 2026 and 2025:

¹ Includes depreciation expense of CHF 0.3 million and CHF 0.5 million for 2026 and 2025, respectively.

² Includes share-based compensation expense of CHF 0.7 million and CHF 0.8 million for 2026 and 2025, respectively.

For the six months ended June 30, 2026:

Discovery and preclinical expenses decreased by CHF 2.6 million, primarily due to reduced activities in early-stage programs such as our MorADC and PET tracer programs, and reduction in expenses related to ACI-19764 whereby the pre-clinical development activities were completed in prior periods.

Clinical expenses decreased by CHF 3.9 million as a result of the following variances:

- A decrease of CHF 4.5 million relating to ACI-24, primarily due to manufacturing costs incurred in the prior period which did not recur in the current period.
- An increase of CHF 1.9 million relating to ACI-19764, our proprietary NLRP3 inhibitor small molecule which entered into Phase 1 clinical development in 2026.
- A decrease of CHF 0.7 million related to the Phase 2 VacSYn study evaluating ACI-7104.056 in early PD, as Part 1 nears completion.
- Other clinical programs include our PET tracer programs which have less activity in the current period following strategic review of the programs.

The variances in Group function expenses are related to lower support costs related to regulatory and quality assurance, and intellectual property costs.

Payroll expenses decreased by CHF 2.3 million as a result of reduced headcount following the reorganization in Q3 of 2025.

Other non-allocated expenses are related to infrastructure and functional expenses not allocated to direct R&D expenses. These R&D support costs have reduced following the portfolio prioritization initiatives in Q3 of 2025.

General and administrative expenses

General and administrative expenses consist of salaries and related costs, including share-based compensation, professional fees such as legal and accounting related services, infrastructure expenses, and other operating expenses.

For the six months ended June 30, 2026, general and administrative expenses totaled CHF 7.7 million compared with CHF 8.3 million for the comparable period in 2025. This represents a decrease of CHF 0.6 million. The following table presents the general and administrative expenses during the six months ended June 30, 2026 and 2025:

In CHF thousands, unaudited	For the Six Months Ended June 30,		Change
	2026	2025	
Operating expenses ¹	2,222	2,265	(43)
Salaries and related costs ²	5,492	6,069	(577)
Total general and administrative expenses	7,714	8,334	(620)

¹ Includes depreciation expense of CHF 0.7 million for each period presented

² Includes share-based compensation expense of CHF 1.8 million for each period presented.

For the six months ended June 30, 2026, this decrease is primarily due to:

- a decrease of CHF 0.6 million in salaries and related costs following the reorganization in September 2025.

Other operating income/(expense), net

Other operating income/(expense), net consists primarily of income associated with foundation grants such as those from the Goradia grant.

For the six months ended June 30, 2026, other operating income/(expense), net totaled CHF 0.1 million compared with less than CHF 0.1 million for the comparable period in 2025. The following table presents the other operating income/(expense), net during the six months ended June 30, 2026 and 2025:

In CHF thousands, unaudited	For the Six Months Ended June 30,		Change
	2026	2025	
Other operating income/(expense), net	107	21	86
Total other operating income/(expense), net	107	21	86

For the six months ended June 30, 2026, the increase of CHF 0.1 million in grant income primarily derived from activities related to our Goradia award that was initiated in June of 2026.

For the six months ended June 30, 2026, net finance result was a CHF 0.7 million gain compared with a CHF 1.5 million loss for the comparable period in 2025. This represents an increase of CHF 2.1 million. The following table presents the finance result, net during the six months ended June 30, 2026 and 2025:

In CHF thousands, unaudited	For the Six Months Ended June 30,		Change
	2026	2025	
Financial income	399	1,145	(746)
Financial expense	(126)	(103)	(23)
Exchange differences	395	(2,501)	2,896
Finance result, net	668	(1,459)	2,127

For the six months ended June 30, 2026, the increase of CHF 2.1 million in finance result, net primarily related to:

- a gain in the current period due to exchange differences of CHF 0.4 million due to favorable foreign currency exchange differences related to movement in the CHF versus foreign currencies, predominantly the US Dollar. In the prior year, these fluctuations resulted in a CHF 2.5 million loss for the respective period. This favorable change was offset by reduced financial income generated from interest earned on short-term financial deposits, due to lower interest rates and lower overall balances.

Liquidity and Capital Resources

To date, the Company has financed its cash requirements primarily from its public offerings, share issuances, contract revenues from option, license and collaboration agreements (OLCAs) and grants. The Company is a clinical stage company and is exposed to all the risks inherent to establishing a business. Inherent to the Company's business are various risks and uncertainties, including the substantial uncertainty as to whether current projects will succeed and our ability to raise additional capital as needed. These risks may require us to take certain measures such as delaying, reducing or eliminating certain programs. The Company's success may depend in part upon its ability to (i) establish and maintain a strong patent position and protection, (ii) enter into collaborations with partners in the pharmaceutical and biopharmaceutical industries, (iii) successfully move its product candidates through clinical development, (iv) attract and retain key personnel and (v) acquire capital to support its operations. As of June 30, 2026, we had cash and cash equivalents of CHF 27.8 million and short-term financial assets of CHF 47.6 million for a total liquidity balance of CHF 75.4 million.

Our primary uses of capital are, and we expect will continue to be, R&D expenses, compensation and related expenses and other operating expenses including rent. Cash and cash equivalents used to fund operating expenses are impacted by the timing of when we pay expenses, as reflected in the change in our outstanding trade and other payables and accrued expenses. We expect to incur substantial expenses in connection with our product candidates in various stages of clinical development. In December 2023, it was announced that Janssen has programmed the launch of a Phase 2b clinical study to evaluate ACI-35.030 (JNJ-2056) in patients with preclinical AD, those individuals not yet showing symptoms. AC Immune and Janssen will jointly share research and development costs until the completion of the first Phase 2b, however AC Immune's contribution to the first Phase 2b trial is capped (and remaining costs for AC Immune are non-material). From Phase 2b and onwards, Janssen will assume responsibility for the clinical development, manufacturing and commercialization of ACI-35.030. We intend to increase our R&D costs associated with the advancement of the active immunotherapies, ACI-24.060 targeting Abeta in AD and AD in DS and ACI-7104.056 targeting a-syn in PD, through clinical development, as well as through investments in our diagnostic programs.

We plan to continue to fund our operating and capital funding needs through proceeds received from OLCAs and through equity or other forms of financing.

Cash Flows

The following table summarizes AC Immune's cash flows for the periods indicated:

in CHF thousands, unaudited	For the Six Months Ended June 30,		Change
	2026	2025	
Net cash provided by/(used in):			
Operating activities	(15,646)	(34,414)	18,768
Investing activities	16,588	26,911	(10,323)
Financing activities	142	(505)	647
Net (decrease) in cash and cash equivalents	1,084	(8,008)	9,092

Operating activities

Net cash used in operating activities was CHF 15.6 million for the six months ended June 30, 2026, compared with net cash used in operating activities of CHF 34.4 million for the six months ended June 30, 2025. The change in cash used in operating activities for the six months ended June 30, 2026 was due to i) the Company's reporting a net loss of CHF 12.9 million for the period, compared with a net loss of CHF 40.2 million for the same period in 2025 combined with ii) the increase in short term deferred revenue of CHF 7.1 million period over period. These two changes were offset by fluctuations including i) an increase in accounts receivable of CHF 9.9 million in the current period compared to nil in the prior period; ii) a decrease in operating cash flows related to finance (income), net of CHF 1.7 million representing a lower loss due to foreign exchange rates; and iii) a 2.2 million fluctuation in prepaid expenses as a result of a CHF 0.4 million increase in the current period compared to CHF 1.8 million decrease in the prior period.

Investing activities

Net cash provided by investing activities was CHF 16.6 million for the six months ended June 30, 2026, compared with net cash provided by investing activities of CHF 26.9 million for the six months ended June 30, 2025. The change primarily reflects a net maturation of CHF 27.8 million in short-term financial assets in the prior period compared to a net maturation of CHF 17.0 million in the current period.

Financing activities

Net cash provided by financing activities was CHF 0.1 million for the six months ended June 30, 2026, compared with net cash used in financing activities of CHF 0.5 million for the six months ended June 30, 2025. The change of CHF 0.6 million is primarily related to the net proceeds received from the sale of treasury shares through our ATM program during the six months ended 2026.

Operating Capital Requirements and Plan of Operations

We do not expect to generate revenues from royalties based on product sales unless and until our partners or we obtain regulatory approval of, and successfully commercialize, our current or any future product candidates. As of June 30, 2026, we had cash and cash equivalents of CHF 27.8 million and short-term financial assets of CHF 47.6 million, resulting in CHF 75.4 million of liquidity. The decrease of CHF 16.0 million relative to December 31, 2025 was predominantly related to R&D spending on our major discovery and R&D programs, the strengthening of the Company's infrastructure, systems and organization and other operating expenditures. We believe that our existing capital resources, assuming no other milestone payments, will be sufficient to meet our projected operating requirements through Q4 2027. There can be no certainty as to the exact timing of future milestone payments (including option exercise fees), or in fact, whether any of these will ever be made, given that they are contingent on clear milestones being reached.

We expect to generate losses for the foreseeable future, and these losses could increase as we continue product development until we successfully achieve regulatory approvals for our product candidates and begin to commercialize any approved products. We are subject to all the risks pertinent to the development of new products, and we may encounter unforeseen expenses, difficulties, complications, delays and other unknown factors that may harm our business. We anticipate that we will need substantial additional funding in connection with our continuing operations. If

we need to raise additional capital to fund our operations and complete our ongoing and planned clinical studies, funding may not be available to us on acceptable terms, or at all.

Our future funding requirements will depend on many factors, including but not limited to the following:

- The scope, rate of progress, results and cost of our preclinical and clinical studies and other related activities, according to our long-term strategic plan;
- The cost of manufacturing clinical supplies and establishing commercial supplies of our product candidates and any other products we may develop;
- The cost, timing and outcomes of regulatory approvals;
- The costs and timing of establishing sales, marketing and distribution capabilities;
- The terms and timing of any collaborative, licensing and other arrangements that we may establish, including any required milestone and royalty payments thereunder;
- The emergence of competing technologies or other adverse market developments; and
- The potential cost and timing of managing, protecting, defending, and enforcing our portfolio of intellectual property.

AC Immune First Half 2026 Financial and Corporate Update

Focused portfolio of wholly-owned programs approach near-term clinical catalysts as partnered programs generate milestone payments

- Key advances across pipeline, with further near-term clinical results anticipated for H2 2026
- Phase 2 VacSYn trial of ACI-7104 in Parkinson's disease supported by a \$4 million grant from The Vijay and Marie Goradia Charitable Foundation
- Morphomer small molecule program targeting intracellular Tau progresses with Lilly
- Initiation of Alzheimer's disease AD4 cohort in ABATE trial triggered \$12 million milestone payment from Takeda
- Cash resources of CHF 75.4 million as of June 30, 2026, provide funding into Q4 2027

Lausanne, Switzerland, August 5, 2026 -- AC Immune SA (NASDAQ: ACIU), a clinical-stage biopharmaceutical company developing targeted therapeutics for neurodegenerative diseases, today provided a corporate and financial update for the half-year ended June 30, 2026.

Martin Zügel, MD, interim CEO of AC Immune and Chair of the Board of Directors, commented: "AC Immune is moving towards key clinical milestones in two of our wholly-owned programs, a growing focus for AC Immune. These data include full results from Part 1 of the VacSYn trial of ACI-7104, our anti- α -syn active immunotherapy in Parkinson's disease, as well as initial data from our ACI-19764 trial. The important milestone payments in our partnered programs ensure we are funded into Q4 2027, and that we are well-positioned as we approach these near-term clinical results."

First Half 2026 and Subsequent Highlights:

Wholly-Owned Programs

AC Immune's wholly-owned pipeline is built around three differentiated programs against α -synuclein, TDP-43, and NLRP3, targeting key mechanisms underlying neurodegenerative disease based on extensive preclinical data. The following updates focus on our clinical stage programs. ACI-7104 is an active immunotherapy targeting pathological α -synuclein in Parkinson's disease, designed to generate a targeted immune response with the potential to modify disease progression. ACI-19764 is a small-molecule NLRP3 inflammasome inhibitor aimed at reducing neuroinflammation, a fundamental driver of multiple neurodegenerative disorders. ACI-19626 is a first-in-class TDP-43 PET tracer designed to visualize TDP-43 pathology in living patients, addressing a major unmet need in ALS and related diseases. Together, these

assets provide multiple near-term data catalysts and showcase AC Immune's ability to translate deep neuroscience expertise into both therapeutics and diagnostics.

ACI-7104: anti-a-syn active immunotherapy

- The VacSYn placebo-controlled Phase 2 clinical trial continues, with full results from the complete data set for Part 1 of the trial at week 104 expected to be reported in H2 2026. Clinicaltrials.gov identifier: NCT06015841
- Part 1 of the ongoing Phase 2 VacSYn trial of ACI-7104 in early Parkinson's disease (PD) was extended and received support via a research grant of \$4 million from The Vijay and Marie Goradia Charitable Foundation.
- Previously reported interim results from Part 1 at 76 weeks included changes in biomarkers and clinical measures assessed as signals of the potential impact of treatment with ACI-7104.
- Results to support further development of the program and discussion with regulators to establish a clinical development plan towards registration.

ACI-19764: brain penetrant NLRP3 inhibitor

- Phase 1 trial in healthy volunteers continues, with initial SAD/MAD and pharmacodynamics results expected in the near future.
- These will be followed later in H2 2026 by Phase 1b results on reductions in hsCRP levels in a cohort of patients with CV-risk factors and elevated hsCRP on entry into the trial.

ACI-19626: TDP-43 PET tracer

- Presented new preliminary results from a Phase 1 clinical trial of first-in-class TDP-43 positron emission tomography (PET) tracer ACI-19626 showing increased uptake in the brains of patients with amyotrophic lateral sclerosis (ALS).

Partnered Programs

AC Immune's partnered portfolio validates the strength of its neuroscience platform through collaborations with leading global pharmaceutical companies. The pipeline includes anti-amyloid and anti-tau programs developed in collaboration with Takeda, Lilly, and Janssen, leveraging AC Immune's expertise in protein misfolding and neurodegenerative disease biology. The portfolio also includes diagnostic imaging assets developed with partners to improve patient identification, stratification and treatment monitoring. These partnerships provide access to substantial development resources, milestone and royalty opportunities, and multiple clinical catalysts.

ACI-24: anti-Aβ active immunotherapy

- Dosed the first patients in Cohort AD4 in the ongoing Phase 1b/2 ABATE trial of ACI-24 to treat prodromal Alzheimer's disease (AD). Cohort AD4 is evaluating enhancing ACI-24 with an additional
-

adjuvant to boost immunogenicity. Following the cohort initiation, a \$12 million milestone payment from partner Takeda was triggered.

- Reported high level interim data from the first three cohorts (AD1, AD2 & AD3) of 74 prodromal AD patients in the ABATE trial, following 12 months of treatment. ACI-24 has been generally safe and well tolerated, with no evidence of amyloid-related imaging abnormalities-edema (ARIA-E). Anti-Abeta antibody responses were detected at every dose level.

Morphomer-Tau small molecule program

- Amended agreement with Lilly continues the research and collaboration to include development of new lead Tau Morphomer® candidates and potential back-up compounds, reflecting growing excitement for targeting intracellular Tau and significant progress made with our Morphomer small molecules.
- AC Immune received a CHF10 million upfront payment and will receive a subsequent milestone payment subject to Phase 1 dosing, in addition to other potential development, regulatory and commercial milestones of over CHF1.7 billion, plus tiered percentage royalty payments in the low double digits, as previously disclosed.

Corporate Governance

- After long service Dr Andrea Pfeifer retired from her role as Chief Executive Officer (CEO) of AC Immune at the Annual General Meeting (AGM) to spend more time with her family. AC Immune's Board of Directors appointed the Chair, Dr Martin Zügel, to serve as interim CEO whilst a diligent search for a permanent successor continues apace.
- All agenda items at the AGM were approved by shareholders.

Analysis of Financial Statements for the Half-year Ended June 30, 2026

- **Cash Position:** The Company had total cash resources of CHF75.4 million (CHF91.4 million as of December 31, 2025), composed of CHF27.8 million in cash and cash equivalents and CHF47.6 million in short-term financial assets. The Company's cash resources are expected to provide sufficient capital to last into Q4 2027, excluding potential milestone payments.
- **Revenue:** Total revenues for the six months ended June 30, 2026 were CHF16.2 million compared with CHF2.3 million for the same period in 2025. The increase was due to the achievement of milestones following the amended Lilly agreement resulting in CHF11.0 million of revenue recognized, and efforts under the Takeda arrangements resulting in CHF5.2 million of revenue recognized.
- **R&D expenditures:** R&D expenses for the six months ended June 30, 2026, were CHF22.2 million, compared with CHF32.7 million for the comparable period in 2025. The decrease was partly due to lower personnel and operational spend of approximately CHF4.9 million, largely as a result of our pipeline focus initiatives announced in Q3 2025. Additional decreases of CHF5.8 million resulted from lower spend in our clinical programs including our active immunotherapy programs which had non-recurring manufacturing costs in the prior period. These decreases were offset by increased costs of CHF1.9 million relating to our NLRP3 inhibitor small molecule entering Phase 1 clinical development.
- **G&A expenditures:** G&A expenses in the period were CHF7.7 million in the period ended June 30, 2026, compared to CHF8.3 million for same period in 2025. The decrease reflects the lower personnel costs as a result of our pipeline focus initiatives announced in Q3 2025.
- **Financial result:** The financial result was a gain of CHF0.7 million for the period, compared with a loss of CHF1.5 million for the comparable period. The change was primarily driven by an increase in foreign exchange gains of CHF2.9 million, partially offset by a decrease in interest income earned on short-term financial assets of CHF0.7 million.

IFRS loss for the period: The Company had a net loss of CHF12.9 million for the period ended June 30, 2026, compared to CHF40.2 million for the same period in 2025.
